

## LG G3 S Reviewer's Guide

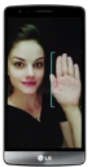

Smart & Simple  
with a Perfect Grip  
*Now, It's All Possible*

# LG G3 S

## Smart and Simple with a Premium and Compact Design

The LG G3 S is the latest addition to LG's smartphone range and following the highly acclaimed LG G3. With a 5.0" true-to-life HD IPS display and a sleek, metallic design, this smartphone is powered by a long lasting 2540mAh removable battery, so it will help you stay connected all day long. Boasting an advanced 8MP with Laser Auto Focus, gesture-controlled selfies and unique features, such as KnockCode™, Smart Notice and Smart Keyboard, the LG G3 S provides best in class technology in a premium and compact design.

### Key Features

#### Gesture Shot

The Gesture Shot feature allows you to take a picture with a simple hand gesture using the front camera – helping you to achieve the perfect selfie. To activate the feature when in camera mode, simply raise your hand, with an open palm, until the front camera detects – it does this by highlighting your hand with blue lines on the screen. Once detected, make a fist to automatically start a countdown before the shot is taken (allowing you time to remove your hand and position yourself).

#### Laser Auto Focus

As first seen on the LG G3, this technology enables the G3 S camera to capture moments quickly – even in low light – by measuring the distance between the subject and the camera using a laser beam. With its quick focus adjustment that's faster than a blinking eye, you will never miss a moment you want to capture.

#### Floating Arc Design

Contributing to the beautifully sleek design of the G3 S is the Floating Arc form factor, which feels incredibly comfortable in one hand and incorporates the innovative design heritage of the Rear Key.

### Smart Keyboard

Smart Keyboard analyses typing habits and intuitively suggests what words you intended to type. Suggested words can be entered with just an upward flick of the thumb. Individual keys can be customised with frequently used symbols for even faster input. The height of the keyboard can also be adjusted to better fit the user's hands.

### KnockCode™

As loved on the G3, KnockCode™ enables users to unlock their device with a pattern of taps. Merging security and convenience, users can create a personalised code that can be entered anywhere on the screen. With more than 86,000 possible KnockCode™ combinations it is one of the most secure means of protecting the content in your phone.

### Key Specifications:

- Chipset: Qualcomm® Snapdragon™ 400 processor 1.2 GHz Quad-Core
- Display: 5.0-inch HD IPS (1280 x 720, 294ppi)
